

SYST 572 – Introduction to Systems Integration Engineering (3:3:0)

Lifecycles in systems engineering and the role of systems integration in these. Large systems comprised of heterogeneous components. The human, organizational, process, and technological basis for systems integration. Societal and cultural basis for systems integration. Conceptual frameworks for systems integration. Structure, function, and purpose of the systems integration industry. Risk management and systems integration. User requirements and functional specifications in systems integration. The bid and proposal process for systems integration. Systems integration and the Federal government. System and Federation of Systems issues in systems integration. Systems integration architectures. Systems management and cost estimation in systems integration. Quality management for systems integration. Increasing returns to scale, network effects, and path dependency issues in systems integration. Systems integration ecology and evolutionary systems integration. Prerequisite SYST 301 or 510 or SYST 520.

A plethora of contemporary available on the Internet concerning systems integration and related issues in architecting for systems integration will be of much use, and experience will be gained in the Internet as a research tool during the course. A course web site on WebCT will be operational and put to much use.

Instructor: Andrew P. Sage, Office: STII, Room 311, Phone: 703-993-1506, Fax: 703-993-1706 Email: asage@gmu.edu

Course Call Number 34953, Spring 2003 Wednesday from 4:30 PM to 7:10 PM in Room ST2-128.

Grades: 50% - examinations; 20% - term paper and presentation; 30% - home assignments. Two take home exams will be given, one approximately at the middle of the semester and one at the end of the semester. There will be a term paper assignment on systems integration engineering, including a written report and oral presentation, and weekly assignments. Presentation: Each student will give a seven (7) minute formal oral presentation and prepare a term paper in the general area of systems architecting and integration.

SYST 572 - Detailed Syllabus and outline, by dates (subject to change) – Spring 2003

1. An Overview of Systems Engineering and Management, Introduction to WebCT – 22 January
2. Human, organizational, societal cultural, and technological basis for systems integration, 29 January
3. Systems Integration Standards and Capability Maturity Models, Part I – 5 February
4. Systems Integration Standards and Capability Maturity Models, Part II – 12 February.
5. The role of architecting in systems integration, Part I – 19 February
6. The role of architecting in systems integration, Part II – 26 February
7. The role of architecting in systems integration, Part III – 5 March, no class 12 March (Spring break)
8. COTS and cost estimation in systems integration, 19 March, Mid Term exams due 19 March
9. Systems integration and recent DoD Acquisition Reform initiatives, 26 March.
10. Integration in a System of Systems and Federation of Systems, Part I, 2 April
11. Integration in a System of Systems and Federation of Systems, Part II. 9 April
12. Path dependence, network effects, and complex adaptive effects in system integration, including evolutionary and emergent approaches to systems integration, Part 1 – 16 April, Part II – 23 April.
13. Term paper presentations/reports, 30 April. Final exam papers due 13 May.
