Classical Systems & Control Theory
Science & Technology II – 257

FALL 2003
703-993-1596
gbeale@gmu.edu

OFFICE HOURS: Monday and Wednesday: 9:00 – 10:15 a.m.
Tuesday and Thursday: 1:30 – 2:45 p.m.
Other hours by appointment only.

PREREQUISITES: Grade of C or better in ECE 220 or POI.

COURSE TEXT: *Modern Control Engineering*, 4th Edition, K. Ogata,
Prentice Hall, 2002, Chapters 1, 3, 5 – 9.

HONOR AND EXAM POLICY:

All students are expected to abide by the George Mason University Honor Code. Sharing of ideas and comparison of answers on homework is acceptable, but copied work will not be accepted. All tests and the final exam will be closed book and closed notes unless specifically stated otherwise by the Instructor. All work must be your own. Any reasonable suspicion of an honor violation will be reported.

Students must arrive in class within 15 minutes of the scheduled starting time for all tests and exams. Students arriving later than 15 minutes after the scheduled starting time will not be allowed to take the test/exam and will receive a grade of 0 for the test/exam.

OBJECTIVES:

1. Learn the purposes, advantages and disadvantages, terminology, and configurations of feedback control systems.
2. Learn ways of classifying, measuring, and analyzing the stability and performance properties of feedback control systems.
3. Learn various classical frequency domain and time domain techniques for designing compensators in order to improve performance in feedback systems.

GRADING:

2 Tests	50%
Homework	10%
Design Project	10%
Final Exam	30%

The lower test grade will count 20%, and the higher test grade will count 30%. Late homework will not be accepted. The 2 lowest homework grades will be dropped in determining a student's homework average.

A student requesting a grade change for a homework or test problem must provide me with the following information in writing within two class periods after the work is returned: (1) the number(s) of the problem(s) to be considered; (2) a description of your mistakes made in the problem(s); and (3) the reason that you feel that you should receive additional points for the work.

COURSE OUTLINE

Chapter 1	Introduction, what control systems are, types of control systems, examples of control systems, what feedback is and why it is used – 1-1/2 class periods.
Chapter 3	Block diagrams and their manipulation – 1-1/2 class periods.
Chapter 5	Transient analysis for systems, model and characteristics of first-order systems, model and characteristics of second-order systems, effects of control actions on system performance, stability analysis with the Routh array, steady-state errors in systems – 7 class periods.
Chapter 6	Closed-loop poles and their movement, concept of the root locus magnitude and phase criteria, constructing the root locus plot, properties of the root locus – 3 class periods.
Chapter 7	Specifications for control systems, designing compensators using the root locus, phase lag and phase lead compensators, lag-lead compensation – 4 class periods.
Chapter 8	Frequency response analysis, polar plots and the Nyquist stability criterion, review of Bode plots, gain and phase margins – 4 class periods.
Chapter 9	Specifications for control systems, designing compensators in the frequency domain, phase lag and phase lead compensators, lag-lead compensation – 4 class periods.

TEST SCHEDULE:

Test 1	Thursday, September 18	Chapters 1, 3, 5 (half)
Test 2	Tuesday, October 21	Chapters 5 (half), 6
Final Exam	Tuesday, December 16 1:30 – 4:15 p.m.	Comprehensive, with Chapters 7, 8, 9 emphasized

Last Day to Drop without Dean's Permission: Friday, September 26
No class on Tuesday, October 14, due to **COLUMBUS DAY BREAK!!!**
