

SYST 520 –System Design and Integration (3:3:0) System design and integration methods are studied, including both structured analysis and object oriented approaches: life cycle of systems, and generation and analysis of life cycle requirements; architectural representations, including development of functional, physical, and operational architectures for allocation and derivation of component-level requirements for the purpose of specification production; examination of interfaces and development of interface architectures. The last part of the course discusses object orientation in systems engineering design and architecting and utilizes the Unified Modeling Language (UML) and extensions. Software tools are introduced and used to support design, including architecture and integration efforts.

Required Texts:

Buede, D. M., *The Engineering Design of Systems*, John Wiley and Sons, Inc. 2000.

Fowler, M., *UML Distilled: A Brief Guide to the Standard Object Modeling Language*, 3rd Edition, Addison Wesley, 2004.

Booch, G., Rumbaugh, J., and Jacobson, I., *Unified Modeling Language Users Guide*, Addison Wesley, Reading MA, 1999.

Eriksson, H. E. and Penker, M., *Business Modeling with UML: Business Patterns at Work*, John Wiley, New York, 2000.

Quatrani, T., *Visual Modeling with Rational Rose 2000 and UML*, Addison Wesley, Reading MA, 2000.

Rumbaugh, J., Jacobson, I., and Booch, G., *Unified Modeling Language Reference Manual*, Addison Wesley, 1999.

Sage, A. P. and Rouse, W. B. (Eds.), *Handbook of Systems Engineering and Management*, John Wiley, New York, 1999.

Sage, A. P., *Systems Management for Information Technology and Software Engineering*, John Wiley, New York, 1995.

Sage, A. P., *Systems Engineering*, John Wiley, 1992.

A plethora of contemporary literature available on the Internet concerning systems design and integration and related issues in architecting will be of much use, and experience will be gained in the Internet as a research tool during the course. A course web site on WebCT will be operational and put to much use. We will gain experience in using the CORE software package for design and architecting. Other software will be briefly discussed: Rational Rose, System Architect, and Metis.

SYST 520-002, Course Call Number 74512. Fall 2004 Thursday from 4:30 PM to 7:10 PM in Innovation Hall IN 131.

Grades: 50% - examinations; 20% - term paper; 30% - home assignments. Two take home exams will be given, one approximately at the middle of the semester and one at the end of the semester. There will be a term paper assignment on systems design and architecting, including a written report, and weekly homework assignments.

SYST 520 - Detailed Syllabus and outline, by dates (subject to change) – Fall 2004.

1. An overview of systems engineering (Buede, Ch. 1), Introduction to WebCT – 2 September.
2. Introduction to systems engineering and architecting software tool CORE – 9 September.
3. Systems engineering design process (Buede, Ch. 2) – 16 September.
4. Modeling and process modeling (Buede, Ch. 3) – 23 September.
5. System requirements and identification of design definition (Buede, Ch. 6) – 30 September.
6. Functional architecture definition (Buede, Ch. 7) – 7 October.
7. Physical architecture definition (Buede, Ch. 8) – 14 October.
8. Operational architecture definition (Buede, Ch. 9) – 21 October. Mid term exams due 21 October.
9. Interface design and system integration and qualification (Buede, Ch. 10, 11) – 28 October.
10. Alternative structural and architectural representations (Buede Ch. 12, APS supplement) – 4 November.
11. Object Oriented modeling and Unified Modeling Language (Fowler) – 11 November.
12. Object Oriented modeling and Unified Modeling Language (Fowler) – 18 November.
13. Object Oriented modeling and Unified Modeling Language (Fowler) – 2 December.
14. Object Oriented modeling and Unified Modeling Language (Fowler) – 9 December.
15. Term papers and final exam papers due 16 December.

APS: 4 August 2004.
