

**SYST 619 / ECE 672 / SYST 750 Introduction to Architecture Based Systems Engineering. (3:3:0) Spring 2012** Lifecycles in systems engineering and the role of systems integration and architecting in these. Conceptual frameworks for systems architecting. Structure, function, and purpose of systems architecting and integration. Risk management and systems architecting and integration. User requirements and functional specifications in systems architecting. Prerequisites: SYST 510 or 520 or permission of instructor.

This course is part of the degree track, concentration, and certificate in architecture based systems integration. There is much interest today in the engineering of systems that are comprised of other component systems, and where each of the component systems serves organizational and human purposes. These systems are often categorized as system families, systems-of-systems, or federations of systems. The design of architectures is a major ingredient in the design of systems families and provides the conceptual basis for achieving system integration. Towards this end, the Department of Defense has issued regulations for the acquisition of systems. These require an architecture-based approach and focus on how a proposed system will be integrated with other existing or planned systems. Studies in this area cover: formulation of the system integration problem, definition of architecture frameworks, use of structured analysis and object oriented methodologies for the design of architectures, modeling and simulation for evaluation of architectures and approaches to integration, interoperability concerns, and the Lead Systems Integrator. Both defense and industrial applications are considered.

A plethora of contemporary literature is available on the Internet concerning systems integration and related issues in architecting for systems integration. This will be of much use, and experience will be gained in the Internet as a research tool during the course. A course web site on Blackboard will be operational and also put to much use.

Instructor: Andrew P. Sage, Office: School of Engineering, Room 2240, Phone: 703-993-1506, Fax: 703-993-1521, Email: [asage@gmu.edu](mailto:asage@gmu.edu), Office Hours by Appointment.

Course Call Numbers: SYST 619 001 11608, SYST 619 DL1 16381, ECE 672 001 11614, SYST 750 002 15376, SYST 619 621 20724

Offered Location Spring 2012 Thursday from 4:30 PM to 7:10 PM in Room 3511 Nguyen Engineering Building.

Grades: 50% - examinations; 15% - term paper; 35% - home assignments. Two take home exams will be given. There will be a term paper assignment in the general area of systems architecting and integration, including a written report, and weekly assignments.

SYST 619, ECE 672, SYST 750 Detailed Syllabus and outline, by dates (subject to change)

1. An Overview of Architecture Based Systems Engineering, Introduction to Blackboard - 26 January 2012
  2. Architectural Frameworks and Architecture Development Processes I – 2 February 2012
  3. Architectural Frameworks and Architecture Development Processes II - 9 February 2012
  4. Architectural Issues in Engineering System Families (System of Systems), 16 February 2012
  5. System Family Integration and Architecture Frameworks, 23 February 2012
  6. DOD Series 5000 and JCS 3170, DODAF, JTA, MODAF– the three views, 1 March 2012
  7. COTS and Cost Estimation in Systems Architecting and Integration I 8 March 2012
  8. No Class 15 March 2012– Mid Term Break
  9. COTS and Cost Estimation in Systems Architecting and Integration II, Mid Term due 22 March 2012
  10. Architecting and Integration in a System of Systems, 29 March 2012
  11. Case Studies in Architecting and Systems Integration, 5 April 2012
  12. Architecture and Integration in Capability Based Planning, 12 April 2012
  13. Path Dependence, Network and Complex Adaptive System Architecting and Integration, 19 April 2012
  14. Introduction to service Oriented Architectures, 26 April 2012
  15. Introduction to service Oriented Architectures II, 3 May 2012, Term Papers due 5 May 2012
  16. Final exams due to Blackboard Thursday 10 May 2012
- APS 10 January 2012
