Department of Systems Engineering and Operations Research

OR 651 – Military Operations Research: Cost Analysis
Spring 2016

Abstract: Cost Analysis is a sub-discipline of Operations Research. While drawing on other disciplines (e.g., Managerial Accounting, Econometrics, Systems Analysis, etc.), Cost Analysis uses the basic tools of Operations Research to solve a specific class of public sector problems. Cost Analysis is an inquiry to assist decision-makers in choosing preferred future courses of action by evaluating selected alternatives on the basis of their costs, benefits, and risks. Cost Analysis is different from Cost Estimating in that projecting future courses of action usually requires mathematical modeling, hence the link to Operations Research and Economic Analysis. This course introduces the basic concepts of Cost Analysis.

This class will follow a lecture format, but there will be a different lecturer each week. An important topic in Cost Analysis is scheduled for each lecture. We draw on the experiences of experts from the cost analysis research and practitioner communities; hence, this course provides a unique introduction to the topic. This course is particularly useful for students of Operations Research, Public Policy, Information and Software Systems Engineering, and Systems Engineering.

Course Coordinators: Thomas P. Frazier, Ph.D.
Deputy Director
Cost Analysis and Research Division (CARD)
Institute for Defense Analyses
4850 Mark Center Drive
Alexandria, VA 22311
tfrazier@ida.org

Andrew G. Loerch, Ph.D.
Associate Professor and Associate Chair Department of
Systems Engineering and Operations Research
George Mason University
4400 University Drive MSN 4A6
Fairfax, VA 22030
703-993-1657 (v)
703-993-1521 (fax)

Time: Thursday, 16:15–18:55

Location: Institute for Defense Analyses

Prerequisites: STAT 344 (or equivalent) – Probability and Statistics for Engineers
OR 541, OR 542 (or equivalent) – Introduction to Operations Research

Textbooks: Handouts as needed

Optional Texts: Quade, E. S., *Analysis for Public Decisions*, 3rd Edition. Englewood Cliffs: Prentice-Hall, 1989.
Fisher, G. H., *Cost Considerations in Systems Analysis*. New York: American Elsevier, 1971.

February 25 **Estimating Relationships - II: Complex Models**
Rm. 1313 P. Lurie, Institute for Defense Analyses

This lecture is a continuation of the lecture on “Simple Models.” The lecture will introduce more realistic non-linear models that are often used to model cost relationships in practice. The same aircraft airframe example used in the earlier lecture will be used again to guide the students through model estimation, diagnostics, testing, and prediction. Also to be covered are methods of cost risk analysis, which allow the analyst to supplement point estimates of cost with more informative distribution on cost

March 3 **Force Costing**
Rm. 1301 L. Roark, Institute for Defense Analyses

Introduces the concepts of force and infrastructure costing. An example will be used to demonstrate how the tools and techniques taught in earlier sessions can be used to create a cost estimate for a change in force structure of a defined force. Infrastructure categories will be defined and their relationship to forces will be discussed. Important questions the analysts must consider will be identified along with possible approaches to overcome inherent shortcomings of available analytical tools and methods. A brief history of force costing and trends for the future will be presented.

March 10 **Spring Break**

March 17 **Mid-term Examination**
Rm. 1313

March 24 **Cost Progress Curves**
Rm. 1313 Andrew Loerch, George Mason University

The public generally understands the notion of the learning curve. This lecture presents the theory and history of the development of the related cost progress curve in common use by cost analysts. The fitting of curve parameters is illustrated using empirical data. Application of the curve is illustrated using an example. Extensions of the cost progress curve are described.

March 31 **Production Rate Effects**
Rm. 1313 D. Tate, Institute for Defense Analyses

The relationships between direct and indirect costs, and fixed and variable costs will be discussed, along with related implications for possible error in forecasts of the costs in future periods. A method for separating fixed and variable costs will be presented. Two methods for forecasting future costs will be described, both of which take into account the component of cost that is fixed, thereby avoiding this source of error in estimates.

April 7 **Schedule Estimating**
Rm. 1313 B. Harmon, Institute for Defense Analyses

As proposed defense system acquisition programs approach major decision points, the reasonableness of planned acquisition schedules must be assessed by DoD representatives. Research into this problem had included the development of databases and methods of assessing the reasonableness of proposed acquisition schedules for tactical aircraft, tactical missiles, and unmanned space systems. The cornerstone of the methods consists of time estimating relationships (TER's). TER's are analogous to CER's, where the dependent variable is a time interval instead of cost. This lecture will focus on both the development of the methods and their application, illustrated using examples.

April 14 **Life-Cycle Costing**
Rm. 1313 J. R. Nelson, Institute for Defense Analyses

Life-cycle cost estimating relationships and procedures will be presented in the context of the DoD acquisition process. A hypothetical fighter aircraft will be used to illustrate the methodology. The phases of the life-cycle (development, production, operating and support) will be described, and the components of costs for each element of the fighter aircraft (airframe, engine, and avionics) will be addressed for these phases. Constant, then-year and discounted life-cycle cost funding streams will be discussed.

April 21 **Software Costing**
Rm. 1313 T. Frazier, Institute for Defense Analyses

Describes the background and history of software cost estimating. The discussion will focus on software metrics used today; software cost estimation methods; software cost models; and the predictive accuracy of current models. Finally, the lecture will deal with the impact of new software engineering practices and tools on software cost estimating.

April 28 **Project Presentations**
Rm. 1313 Andrew Loerch, George Mason University

Final Examination **Thursday, May 5, 16:15–18:55**
Rm. 1313 Andrew Loerch, George Mason University

Performance Evaluation:

Mid-term Examination	30%
Final Examination	30%
Project in Cost Analysis	40%

Student Expectations:

Academic Integrity

Students must be responsible for their own work, and students and faculty must take on the responsibility of dealing explicitly with violations. The tenet must be a foundation of our university culture. [See <http://academicintegrity.gmu.edu/distance/>].

Honor Code

Students must adhere to the guidelines of the George Mason University Honor Code [See <http://oai.gmu.edu/honor-code/masons-honor-code/>].

MasonLive/Email (GMU Email)

Students are responsible for the content of university communications sent to their George Mason University email account and are required to activate their account and check it regularly. All communication from the university, college, school, and program will be sent to students solely through their Mason email account. [See <https://thanatos.gmu.edu/masonlive/login/>].

Patriot Pass

Once you sign up for your Patriot Pass, your passwords will be synchronized, and you will use your Patriot Pass username and password to log in to the following systems: Blackboard, University Libraries, MasonLive, myMason, Patriot Web, Virtual Computing Lab, and WEMS. [See <https://thanatos.gmu.edu/passwordchange/index.jsp>].

University Policies

Students must follow the university policies. [See [University Policies](#)].

Diversity: George Mason University promotes a living and learning environment for outstanding growth and productivity among its students, faculty and staff. Through its curriculum, programs, policies, procedures, services and resources, Mason strives to maintain a quality environment for work, study and personal growth.

Responsible Use of Computing

Students must follow the university policy for Responsible Use of Computing. [See <http://universitypolicy.gmu.edu/1301gen.html>].

University Calendar

Students must follow the university policies. [See [Catalogue](#)].

Students with Disabilities

Students with disabilities who seek accommodations in a course must be registered with the George Mason University Office of Disability Services (ODS) and inform their instructor, in writing, at the beginning of the semester [See <http://ods.gmu.edu>].

Students are expected to follow courteous Internet etiquette.

Student Services:

University Libraries

University Libraries provides resources. [See <http://library.gmu.edu/distance>].

Writing Center

The George Mason University Writing Center staff provides a variety of resources and services (e.g., tutoring, workshops, writing guides, handbooks) intended to support students as they work to construct and share knowledge through writing. [See <http://writingcenter.gmu.edu>]. You can now sign up for an Online Writing Lab (OWL) session just like you sign up for a face-to-face session in the Writing Center, which means YOU set the date and time of the appointment! Learn more about the [Online Writing Lab \(OWL\)](#) (found under Online Tutoring).

Counseling and Psychological Services

The George Mason University Counseling and Psychological Services (CAPS) staff consists of professional counseling and clinical psychologists, social workers, and counselors who offer a wide range of services (e.g., individual and group counseling, workshops and

outreach programs) to enhance students' personal experience and academic performance [See <http://caps.gmu.edu>].

Family Educational Rights and Privacy Act (FERPA)

The Family Educational Rights and Privacy Act of 1974 (FERPA), also known as the "Buckley Amendment," is a federal law that gives protection to student educational records and provides students with certain rights. [See <http://registrar.gmu.edu/privacy>].
